PLUSCO Inc., is a Houston based manufacturer of premium lubricants, sealants, specialty industrial products, greases, degreasers, cleaners, pipe dopes, wireline sealants, wireline sprays, thread compounds, honey oils, valve lubricants, and coatings for oil field use.

PLUSCO has been instrumental in developing a line of environmentally safe products for mining, construction, offshore drilling, manufacturing, oilfield, and refining industries. Contrary to what most people believe, oil field and other large scale operations (which include exploration, drilling and production) do not have to result in damage to an already fragile environment.

PLUSCO has based its primary efforts toward the innovation of products that biodegrade naturally, pose no harm to the environment, are less expensive, and can out-perform current hazardous materials that have been in use.

## Plusco Features:

The superiority of PLUSCO's patented design and development is that the end result is a cleaner environment, along with less down time for machinery, workers, and production sites. This in turn leads to better maintenance, cheaper costs for the customer, and greater financial rewards for industry. We not only engineer products that exceed protection standards for their intended use, but we think of the future, making sure once it is in the ground, the site will not be contaminated (due to our patented biodegradable designs); we do this understanding the benefits to our customers and the world in which we live.

Many of PLUSCO's new products are being formulated with natural biodegradable oils that replace petroleum oils, or derivatives of petroleum oils. Further, other contaminants such as metallic lead, or other heavy metals are being replaced with inert or natural fillers which provide a cleaner well site and will not pollute run-off water. PLUSCO's goal is to provide safe replacements for most of the hazardous or contaminating consumable products currently being used by mining, construction, offshore drilling, manufacturing, oilfield, and refining industries.

We have employed the strongest minds in the engineering field and scientific community to develop products that not only perform well above industry standards, but exceed the rigors of regular use, and can pass PLUSCO laboratory and on-site testing. The future is available today, and PLUSCO can supply the means by which your company can compete on a higher level, and set a new and leading standard in your field.

PLUSCO supports a wide range of products such as, Oil-Field Products, Pipe-Dopes, Thread Compounds, Coatings, Wireline Products, Industrial Products, Specialty Products (we can make custom orders and produce lubrications to your companies specifications, if it can be made we will do everything in our power to accommodate your needs), Valve Lubricants and Sealants, Lubricating Sealants, Oils, Greases, Cleaners, and Degreasers.

PLUSCO sales staff is available at all times and extremely knowledgeable. There is no order too large for us to handle, we welcome bulk orders and can ship our product anywhere in the world. Large corporations that need huge quantity orders filled once, monthly, weekly, or on a need basis are no problem at all; PLUSCO can accommodate any supply schedule (large or small). Our new web site houses an assortment of tools to help streamline ordering and has been implemented to increase the speed at which information is supplied to our customers.

You will find most of PLUSCO's products described in detail on our site and within minutes customers can submit an on-line order form, saving the expense of long distance phone calls, not to mention the efficiency and tracking capabilities the Internet can offer business. Please feel free to contact us any time, PLUSCO looks forward to serving your Industrial and Oilfield needs.
