

# PLUSCO

## Product Data Sheet

### **PLUSCO 305** **Rust Preventative Coating**

**PLUSCO 305 Rust Preventative Coating** is a natural oil based rust preventive which functions as a water displacing fluid on metal surfaces. Upon application **PLUSCO 305 Rust Preventative Coating** forms an amber ultra thin, non-staining rust preventive film. This coating has excellent resistance to salt water spray, displaces the water from surface and leaves a very rust preventative dry film which further protects the metal surface from rust and oxidation. This residual film is effective in the protection of ferrous and non-ferrous metals from atmospheric corrosion even under conditions of high humidity.

**PLUSCO 305 Rust Preventative Coating** is recommended for use on oilfield tubular ID surface, newly machined surfaces, threaded connections, metal parts, fabricated components and equipment, particularly for shipping where rust and corrosion are a frequent problem. **PLUSCO 305 Rust Preventative Coating** is especially effective in protecting grinded or highly polished steel surfaces. **PLUSCO 305 Rust Preventative Coating** is also recommended for application to finished machined surfaces on tools while inventory for medium term storage. For best results, surface has to be cleaned with proper oilfield equipment or sandblasted.

#### **APPLICATION**

**PLUSCO 305 Rust Preventative Coating** can be sprayed, dipped, brush and mop.

**PLUSCO 305 Rust Preventative Coating** can be removed with the use of a light grade hydrocarbon solvent.

#### **TYPICAL SPECIFICATIONS**

Physical Appearance	Liquid
Color	Light Brown
Odor	Moderate Hydrocarbon
Viscosity #4 Ford Cup @ 77°F	15 – 18 Sec.
Melting Point, °C, min (residual film)	135
